

Insights of Bike Ride Data

Rahat

2023-06-18

Preparations

```
rm(list = ls(all.names = TRUE))
```

Data set loading

```
df <- read.csv('../dataset/transformed_clean_data.csv')
```

Summary of null counts

```
null_counts <- sapply(df, function(x) sum(is.na(x)))  
print(null_counts)
```

```
##      ride_id rideable_type  started_at   day_name  ended_at  
##          0           0           0           0           0  
## trip_duration  start_lat   start_lng start_station  end_lat  
##          0           0           0           0           0  
##      end_lng  end_station is_round_trip  member_type  
##          0           0           0           0
```
